

Sensors Project Demo

Christopher Wright | CSCE 546 Mobile Application Development

[Paste screenshot here] Resize to fit in this box. 1. App Open The app opens and is ready to start reading sensor data.	[Paste screenshot here] Resize to fit in this box. 2. Accelerometer + Magnetometer The app displays live accelerometer and magnetometer readings, using two non-GPS sensors.
[Paste screenshot here] Resize to fit in this box. 3. Tilt / Direction Update Changing the emulator virtual sensor position updates the tilt and compass direction values.	[Paste screenshot here] Resize to fit in this box. 4. Sensor Movement or Shake The app responds to movement by updating sensor values and the shake count.

Conclusion: This satisfies the Sensors Project because the app uses at least two sensors, the accelerometer and magnetometer, and does not use GPS for this project.
